190 Study Guide for An Introduction to Chemistry Section Goals and Introductions Section 13.1  
Gases and Their Properties Goals To describe the particle nature of both real and ideal gases. To  
describe the properties of gases that can be used to explain their characteristics: volume, number  
of particles, temperature, and pressure.

A molecular formula is a representation of a molecule that uses chemical symbols to indicate the  
types of atoms followed by subscripts to show the number of atoms of each type in the molecule. (A  
subscript is used only when more than one atom of a given type is present.) Molecular formulas are  
also used as abbreviations for the names of compounds.

My AP Calendar. I am no longer be teaching AP Chemistry. I handing the course off to a colleague in  
Fall 2017, but I am leaving the calendar from my last year of teaching the subject here as a  
resource for teachers interested in pacing for the course.

Sr>Ca>Mg>Be Atomic radii increase going down a group, because successively larger valence-  
shell orbitals are occupied by electrons. For example, strontium has electrons in the fifth shell,  
which contains much larger orbitals than the fourth, third, second, or first shells.

Triethanolamine aka Trolamine (abbr. as TEOA or TELA to distinguish it from TEA which is for  
triethylamine) is a viscous organic compound that is both a tertiary amine and a triol. A triol is a  
molecule with three alcohol groups. Triethanolamine is a strong base. Approximately 150,000  
tonnes were produced in 1999. It is a colourless compound although samples may appear yellow  
because of impurities.

History. Its activity was first identified in 1876 by Frédéric Alphonse Musculus as a soluble ferment. In 1926, James B. Sumner, showed that urease is a protein by examining its crystallized form. Sumner's work was the first demonstration that a protein can function as an enzyme and led eventually to the recognition that most enzymes are in fact proteins.
