In computer science and information theory, a Huffman code is a particular type of optimal prefix code that is commonly used for lossless data compression. The process of finding or using such a code proceeds by means of Huffman coding, an algorithm developed by David A. Huffman while he was a Sc.D. student at MIT, and published in the 1952 paper "A Method for the Construction of Minimum ...

Medical coding is a little bit like translation. Coders take medical reports from doctors, which may include a patient's condition, the doctor's diagnosis, a prescription, and whatever procedures the doctor or healthcare provider performed on the patient, and turn that into a set of codes, which make up a crucial part of the medical claim.

Here's an example: You see a 20-month old child with an injured leg and complete two out of the three key components (expanded problem focused history, expanded problem focused exam, or medical decision making of low complexity) necessary to code a 99213. Upon review of the chart, you notice that the child is due for a refill on his asthma medication.
