A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi. Network computer devices that originate, route and

terminate the data are called ...

Note 1: Data can be continuous or discontinuous (or discrete).. Continuous data is measured, and can represent any value on a continuous scale: height, weight and time are all examples of continuous data.. Discontinuous data is not measured but counted: numbers of employees in a company or cars in a traffic jam are examples of discontinuous data.. Along the x-axis of a line graph, you can only ...
