In number theory, integer factorization is the decomposition of a composite number into a product of smaller integers. If these integers are further restricted to prime numbers, the process is called prime factorization.. When the numbers are sufficiently large, no efficient, non-quantum integer factorization algorithm is known. An effort by several researchers, concluded in 2009, to factor a ...

Shor's algorithm, named after mathematician Peter Shor, is a quantum algorithm (an algorithm that

runs on a quantum computer) for integer factorization, formulated in 1994. Informally, it solves the following problem: Given an integer n , find its prime factors. On a quantum computer, to factor an integer n , Shor's algorithm runs in polynomial time (the time taken is polynomial in n , the size ...
