An inverse problem in science is the process of calculating from a set of observations the causal factors that produced them: for example, calculating an image in X-ray computed tomography, source reconstruction in acoustics, or calculating the density of the Earth from measurements of its gravity field. It is called an inverse problem because it starts with the effects and then calculates the ...

The most widespread ideal was sacred monarchy, with very considerable variations. Several cultures produced an idea of the state. Greece, India, and China produced theories of the origin and purpose of the state. Justice was proclaimed everywhere, with widely different meanings, but usually including equal treatment of poor and rich before the law.
