Statistical Mechanics, Donald A. McQuarrie

In statistical mechanics, the radial distribution function, (or pair correlation function) ($g(r)$) in a system of particles (atoms, molecules, colloids, etc.), describes how density varies as a function of distance from a reference particle.. If a given particle is taken to be at the origin O, and if ρ is the average number density of particles, then the local time-averaged density at a distance ...

1. Introduction. Diagenesis refers to the physical and chemical changes that occur during conversion of sediment into sedimentary rock. The prefix dia-and root -genesis are both from Greek and mean "through" or "across" and the "origin or mode of formation", respectively. Together, they refer to the formation of a sedimentary rock through its entire volume.
