Program Overview. Mechanics is the study of forces that act on bodies and the resultant motion that those bodies experience. With roots in physics and mathematics, Engineering Mechanics is the basis of all the mechanical sciences: civil engineering, materials science and engineering, mechanical engineering and aeronautical and aerospace engineering.

NCEES MDM Problem 538 in the NCEES Mechanical Practice Exam for Machine Design & Materials falls under the topic "Static Design" and has a fairly straightforward solution, except that it's not obvious where the equation came from that it uses for calculating the distortion energy stress.

The goal of the Civil Engineering Program at the Polytechnic University of Puerto Rico is to develop in the students a professional knowledge of the technology needed to enter into these highly competitive fields, and to prepare the graduates to pursue a productive civil engineering career that is characterized by continued professional growth.

Classical physics refers to theories of physics that predate modern, more complete, or more widely applicable theories. If a currently accepted theory is considered to be modern, and its introduction represented a major paradigm shift, then the previous theories, or new theories based on the older paradigm, will often be referred to as belonging to the realm of "classical physics".

Correlations for fuel oils density and temperature are calculated by use of tools based on ASTM D 1250-04 and IP 200/04 (API Manual of Petroleum Measurement Standards, Chapter 11- physical properties Data, Section 1:Temperature and pressure volume correction factors for generalised crude oils, refined products and lubricating oils).. Examples of the use of the figures are given below the figures.

## **Density of fuel oils as function of temperature**

A reciprocating pump is driven by a 20hp synchronous motor at a speed of 1200 rev/min. The pump is to operate at 400 rev/min. Despite the speed, the load is light ( $K_s=1.2$ ).
